

EDUCATION	
• <b>University of Waterloo</b> <i>PhD in Mathematical Optimization at the department of Combinatorics &amp; Optimization</i>	May 16 - Apr 21
• <b>Sharif University of Technology</b> <i>Bachelor's and Master's degree in Fundamental Mathematics</i>	Sep 06 - Jul 12

DEVELOPMENT PROJECTS	
• <b>Solving Pasur Using GPU-Accelerated Counterfactual Regret Minimization</b> ( <a href="#">arXiv Preprint</a> ) Developed a CUDA-accelerated computational framework with optimized memory management to simulate a fishing card game, enabling the creation of an AI agent to play the game using Reinforcement Learning.	
<div>Tags: Reinforcement Learning Artificial Intelligence Counterfactual Regret Minimization Efficient Computing PyTorch</div> <div>Game Theory GPU Optimization Memory Management Nash Equilibrium</div>	
• <b>Generative Modeling of Heston Volatility Surfaces Via Variational Autoencoders</b> ( <a href="#">Project Page</a> , <a href="#">Code</a> ) Trained a Variational Autoencoder (VAE) on Heston stochastic volatility models to generate volatility surfaces for use in option pricing and financial applications.	
<div>Tags: Deep Learning Generative AI Variational Autoencoder PyTorch Heston Volatility Surfaces Vectorization</div> <div>Monte Carlo Simulation Numerical Analysis Optimization Option Pricing</div>	
• <b>Implementing Deep Smoothing for Implied Volatility Surfaces</b> ( <a href="#">Project Page</a> , <a href="#">Code</a> ) Implemented in Python the methodologies from Deep Smoothing of the Implied Volatility Surface (Ackerer et al.), with independently developed approaches to neural network training, convergence, and implementation details.	
<div>Tags: Deep Learning Generative AI Feed Forward Networks PyTorch Volatility Surfaces Vectorization SSVI</div> <div>Convex Optimization CVX Fine-tuning Option Pricing</div>	

WORK EXPERIENCE	
• <b>TD (Data Scientist III)</b> <i>Current position</i> Developed models to analyze customer behavior across the full banking portfolio to detect fraudulent activity for the financial crime risk management team. Supported stakeholders with ad-hoc requests by applying problem-solving and programming expertise.	Jul 23 - Present
<div>Tags: Python PySpark SQL SAS Problem Solving Modeling Data Science</div>	
<b>CIBC (Quantitative Analyst)</b> Constructed time series for non-modellable credit derivative risk factors and designed methodologies to meet risk management mandates. Built an OOP Python package with parallel processing to handle large datasets and applied bash scripting to ensure maintainability.	Aug 22 - Jul 23
<div>Tags: Mathematical Finance FRTB Python Performance Optimization Parallel Processing OOP</div>	
<b>Huawei Noah's Ark Lab (Machine Learning Researcher)</b> Accelerated neural networks' SoftMax layer in PyTorch for both training and inference. Achieved baseline accuracy using only the optimal number of bits for classification, i.e., $\lceil \log_2 c \rceil$ where $c$ is the number of classes.	Feb 22 - Aug 22
<div>Tags: Deep Learning Transformers Quantization Research Weight Distributions Pytorch</div>	
<b>University of Waterloo (Postdoc (CS), Grad (C&amp;O))</b> Conducted research in stochastic optimization and graph neural networks	May 16 - Feb 22
<div>Tags: Numerical Analysis Integer Programming Optimization Statistics Machine Learning Python CPU/GPU C++</div> <div>MATLAB Parallel Processing Dask Spark Code Performance Optimization OOP</div>	
<b>Young Scholars Club (Seasonal Mathematical Olympiad Coach (Iran))</b> Taught courses in Algebraic Combinatorics, Analytic Number Theory, Probability Theory, and Algebra. Led challenging problem-solving sessions (e.g., Putnam) to develop students' mathematical skills and contributed to the problem-design committee for the Iranian Mathematical Olympiad.	Sep 06 - May 16

## ACADEMIC PROJECTS

---

- **Solution Manual to Stochastic Calculus for Finance II** ([Manuscript](#))

Authored a complete solution manual for Stochastic Calculus for Finance II, covering all exercises.

**Tags:** Mathematics Stochastic Calculus Option Pricing Finance Probability Theory

- **A Matrix Concentration Inequality for Products** ([arXiv Preprint](#))

Provided a non-asymptotic bound on the product of random positive semidefinite matrices, which can be used to analyze the convergence behavior of stochastic gradient descent in machine learning.

**Tags:** Mathematics High Dimensional Statistics Probability Theory

- **A Termination Criterion for Stochastic Gradient Descent for Binary Classification** ([arXiv Preprint](#))

Developed a computationally efficient early stopping criterion for machine learning, supported by theoretical guarantees, showing strong predictability on unseen data. Presented at the [NeurIPS](#) and the [Fields Institute](#).

**Tags:** Stochastic Gradient Descent Mixture of Gaussians Machine Learning Early Stopping Markov Chains Stochastic Stability

## SELECTED HONORS AND AWARDS

---

International Scientific Olympiad in Mathematics (Silver Medal, 2010). Iranian Math. Olympiad (Silver Medal, 2005)<sup>1</sup>

---

<sup>1</sup>Olympiad medals are awarded annually to 40 out of 320,000 competing students
